OBJECTIVE

Technical artist and Gameplay/Graphics programmer. Available from May 2025. Open to relocate.

EDUCATION

Rochester Institute of Technology (RIT)   *Aug/2023 - Present*
Master of Science in Game Design and Development
Course Taken: Computer Animation, Game Graphics Programming, Global Illumination
University of Science and Technology of China (USTC)   *Sep/2019 - June/2023*
Bachelor of Engineering in Computer Science
Course Taken: Computational Methods, Equations of Mathematical Physics, Data Structure and Algorithm

SKILLS

Programming	Proficient in C, C++, C#, GLSL, HLSL, Python, Swift, Java, HTML
Library	OpenCV, OpenGL, OpenXR, DirectX11, CUDA, ARKit, RealityKit
Software	Visual Studio Code, Visual Studio, Xcode, Unity, Unreal Engine, Trello, Figma

WORK EXPERIENCE

Magic Spell Studio, Augmented Reality Software Engineer   *Jan/2024-Present*
Keywords: VR/AR, Unity, C#, SwiftUI, ARKit, RealityKit, ios, Figma, Trello
• Developed an AR windowed application using Unity for Apple Vision Pro to be used in medical fields.
• Worked with designers to implement complex UI/UX system to meet client's needs.
• Worked with data engineers to migrate data from FHIR server to an AR application.
• Using SwiftUI, ARKit, Compositor Services, and RealityKit to develop an AR immersive application for Apple Vision Pro to be used in medical research.
• Separated the main thread of the program into multiple threads and improved the overall speed by 30%.

PROJECTS

Duolatera (Capstone VR online co-op puzzle game)   *Aug/2024-Present*
as Technical Artist, and Graphics/Gameplay Programmer, using Unreal Engine 5, C++, and HLSL
• Designed and implemented a cel-shading pipeline for forward rendering which is otherwise unachievable through regular methods commonly used in deferred rendering
• Using both HLSL and shader graph, created procedurally generated portal materials as well as several other shaders for in-game props.
• Implemented dialogue system, voice chat system, and several other gameplay puzzle mechanics.
GPU-Based Global Illumination Renderer and Ocean Simulator   *Jan/2024-May/2024*
as Graphics Programmer, using Linear Algebra, C++, OpenGL, GLSL
• Implemented a path tracer that allows user-defined primitive shapes including triangles and spheres.
• Based on this path tracer, implemented a realistic Ocean Simulation shader with Gerstner wave, Caustics, and click-prompted ripples.
VR-Live VR/Graphics Programmer, using Unity, GitHub, Sony Mocopi   *Aug/2023-Dec/2023*
• Built and integrated a framework that works with Sony Mocopi to use as Motion Capture tool in VR-Live performances. It allows multiple performers and 20+ audiences to connect over the network at the same time.
Warped as Gameplay Programmer and Technical Artist, using Unity, GitHub, Agile   *Aug/2023-Dec/2023*
• Implemented a complex rotation system as the main mechanism of a top-down isometric puzzle game.
• Designed and implemented tools using both Bezier Curve and Catmull-Rom spline for artists to create cut-scene animation.
